

CHECK-IN-DUOS and or SHARE THOUGHTS

Target

Quickly and efficiently check answers to questions or assignments where only one answer is correct. Saves time when revising.

When:

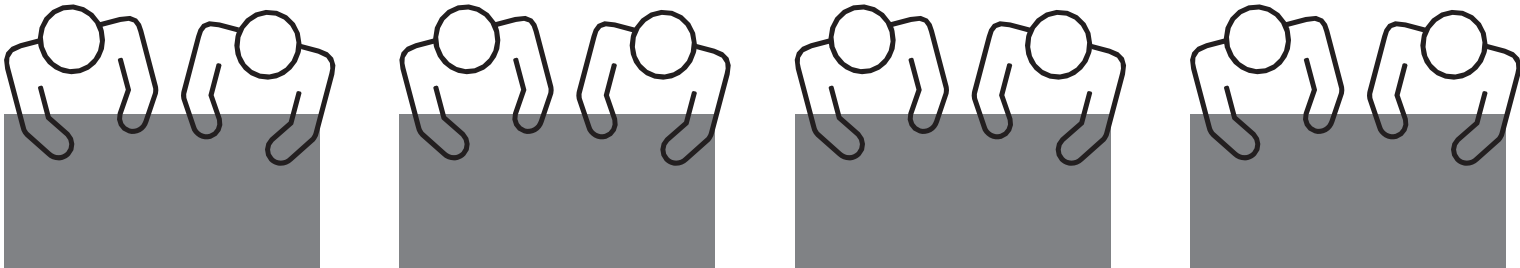

Closed questions or assignments strong teacher guidance
Suitable for short jobs

Work method:

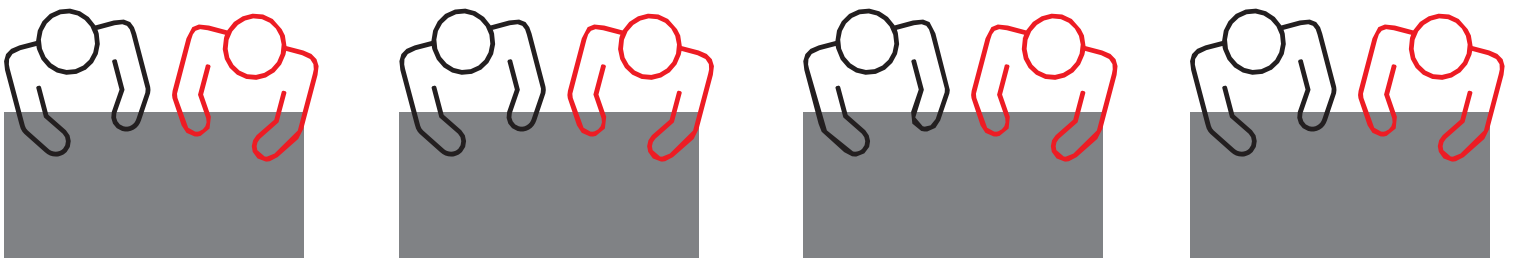

Step 1: Individual performance of the task (could be homework, for example)

Step 2: Students work in pairs to compare their own answers with those of another student. For different answers, they look for the correct answer.

Step 3: Compare the answers again with another pair

Step 4: Control in class: the teacher discusses only those questions on which the pairs could not agree.

(This can also be done if the pairs correct their assignments with a correction key, only then there is less 'real' interaction. Just look at the answer sheet and the discussion is over.)
