

GROUPING

Preparation

Provide a large number of fragments (texts, writers' texts, poems on various topics, methods for solving mathematical problems, rules, road signs, physical laws, equations, ...) that are initially arranged in groups of 4 for example.

Work method

The large number of fragments is mixed and distributed among the students. The students talk and exchange information and try to find the groups of four.

The tutor can indicate which groups of 4 are present, ... or not.
